Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 11-15 are rejected under 35 U.S.C. 102(e) as being anticipated by Maginnis et al. (2007/0034016) (hereinafter Maginnis).

Maginnis teaches all the features of the instant invention including a an ultrasonic flowmeter comprising two ultrasonic transceivers mounted in spaced relation to each other in an axial direction on the outer peripheral surface of a pipe (Fig. 1) where each transceiver comprises a cylindrical transmitting body (108, 110) integrally formed with the pipe and an ultrasonic transducer (104, 106) spaced apart from the outer peripheral surface of the pipe. Applying a

voltage to the ultrasonic transducer, it is known that the piezoelectric material would contract and expand and thus generate a wave signal that transmits from one transducer to the other and vice versa. The sensor of Maginnis is formed of resin.
